

IPA 2

2nd MODULE

ASD Students' needs

INDEX OF CONTENTS

1 How to identify students with ASD
in the classroom?

2 Support proposals related to:

2.1 Adequacy of spaces

2.2 Planning and
temporal structuring

2.3 Task organization

2.4 Evaluation types
and formats

2.5 Groupings

2.6 Subject support

2.7 Motivation

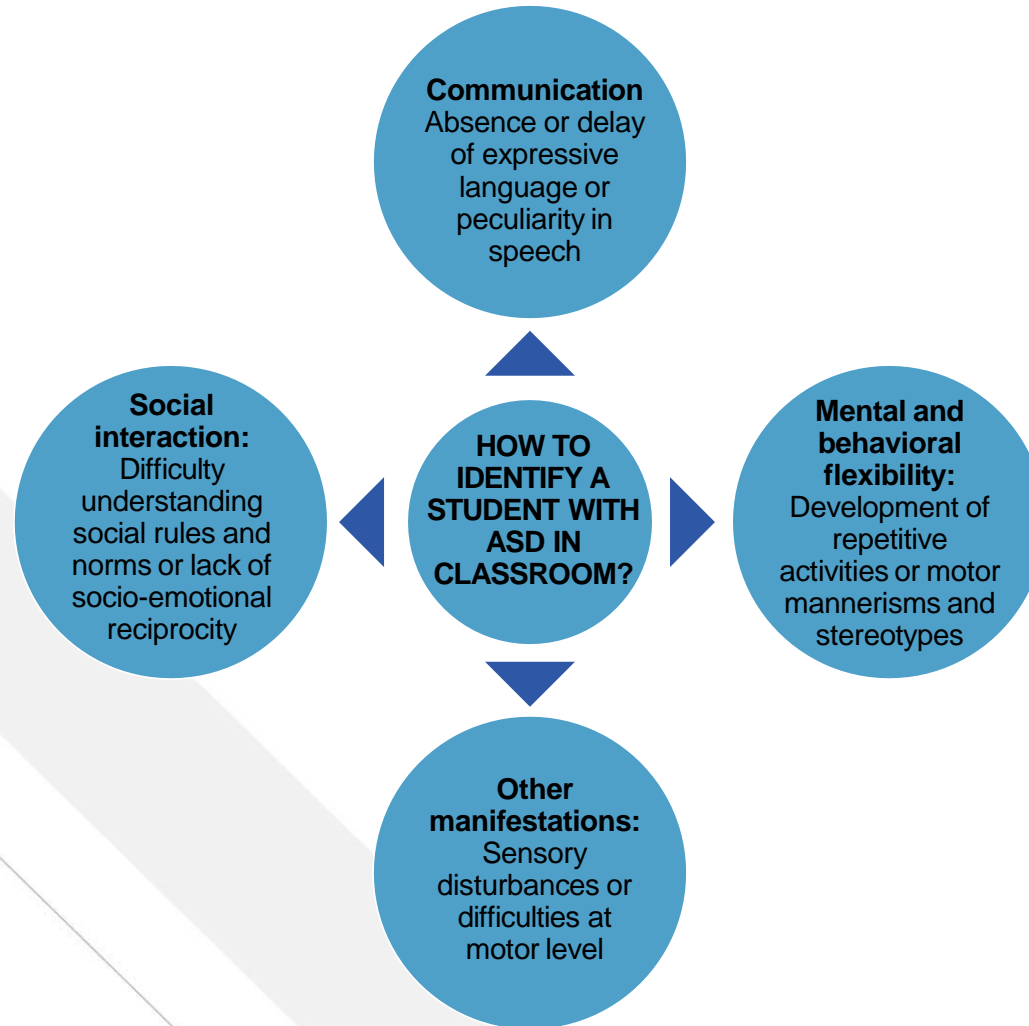

2.8 Activities

2.9 Sensory control and
self-regulation

2.10 Organization of
recess and times with
less structure

3 Guidelines to promote
communication

1. How to identify students with ASD in the classroom?

**2.
Support
proposals related
to:**

CLASSROOM

Structuring of spaces, times and activities
TEACCH method
(Treatment and Education of Autistic and Related Communication Handicapped Children)

OBJECTIVE

**To achieve the maximum degree of
autonomy of the students**

TEACCH

2. Support proposals related to:

PHYSICAL STRUCTURE OF THE CLASSROOM

To organize the classroom, we must take into account a series of premises:

THE CLASSROOM MUST BE DIVIDED INTO SPECIFIC AREAS OR CORNERS

Reading corners, individual work corner, computer corner, etc

THE CORNERS SHOULD BE VISUALLY HIGHLIGHTED

Generating spaces with clear limits

THE CLASSROOM HAS TO BE ADAPTED TO THE NEEDS AND COGNITIVE CHARACTERISTICS

Also emotional characteristics

ADAPTED MATERIALS THAT INDICATE WHAT TO DO

When the activity is finished or where the material is kept

Organized environment

Visual information

Reading corner

TEACCH

2. Support proposals related to:

AGENDAS

Daily agendas offer students a lot of clarity and predictability in their day-to-day life since they know what they have to do at all times. They offer them visual information about where they are going to be, what activities they are going to do and in what order.

There are many **types** of them:

Transition object

Sequence of objects

Unique photo/drawing

Photo sequence for part of the day

Sequence of drawings

Written list

TEACCH

2. Support proposals related to:

WORK SYSTEMS

Work systems help them organize each of the activities that they have to carry out throughout the day.

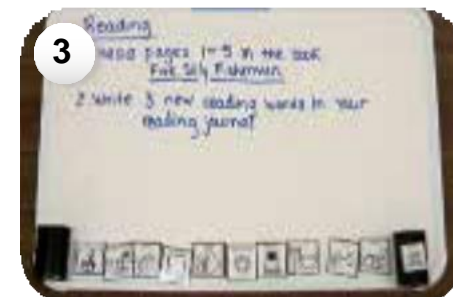

The purpose of work systems is to organize activities and provide meaningful and organized ways to perform specific activities.

There are **three types**:

From left to right, with “finished” container

Pairing (colors, shapes, letters, etc)

Writings

TEACCH
**2. Support
proposals related
to:**

VISUAL INFORMATION

Each task that they carry out has to be clearly structured and must be very visual to increase understanding. There are three components to consider:

1. VISUAL CLARITY

- a) Specifying the components of a task
- b) Highlighting the relevant aspects of the task through labels, highlighters, etc.

2. VISUAL ORGANIZATION

- a) The distribution and stability of the materials used to perform the tasks.
- b) Divide tasks into simpler parts.

3. VISUAL INSTRUCTIONS

Visual aids to understand what to do.

2. Support
proposals related
to:

TASK ORGANIZATION

GUIDELINES

▼ avoid
ANXIETY

PERFORM WORK IN A SAFE WAY

Write the assignments with
the indications of the same
in a specific place

Have a place that can be
established in the
classroom to drop the
homework or arrange for
them to be picked up a
certain time of the day

Give the homework at the
same time every day

2. Support
proposals related
to:

EVALUATION TYPES AND FORMATS

ANTICIPATION

It is very important to anticipate in advance when the exam will be.

Exams in all subjects in **a similar way**.

OBJECTIVE TESTS

Multiple choice (true false, choose options, etc)
Underline or surround options
Join with arrows
Question answer

Assess the **ORAL EXAMS**

Provide a script before taking the exams

2. Support proposals related to:

EXAMPLE OF A SCRIPT FOR AN EXAM

The exams will consist of five questions:

- **Two of them are questions to develop** (minimum 4 lines - maximum 10 lines).

The approximate time to answer each of these questions will be 15 minutes.

The maximum score per question is 3 points out of 10.

- **Two other questions will be definitions.**

The definitions will be answered in two and three lines. They will be expected to be accompanied by at least one

example in which its correct use is shown.

Each of the definitions will be valued at 1 point out of 10.

The approximate time to complete each definition will be 4 minutes.

- **The last question will consist of a parsing of a sentence.**

The correct order for the analysis implies:

1. Determine the type of prayer.

2. Analyze first the noun phrase and then the verb phrase, adjective phrase, without adverbial tag, prepositional phrase.

3. Analyze the complements that appear in the sentence.

4. Syntactic functions of each of the words that make up the sentence.

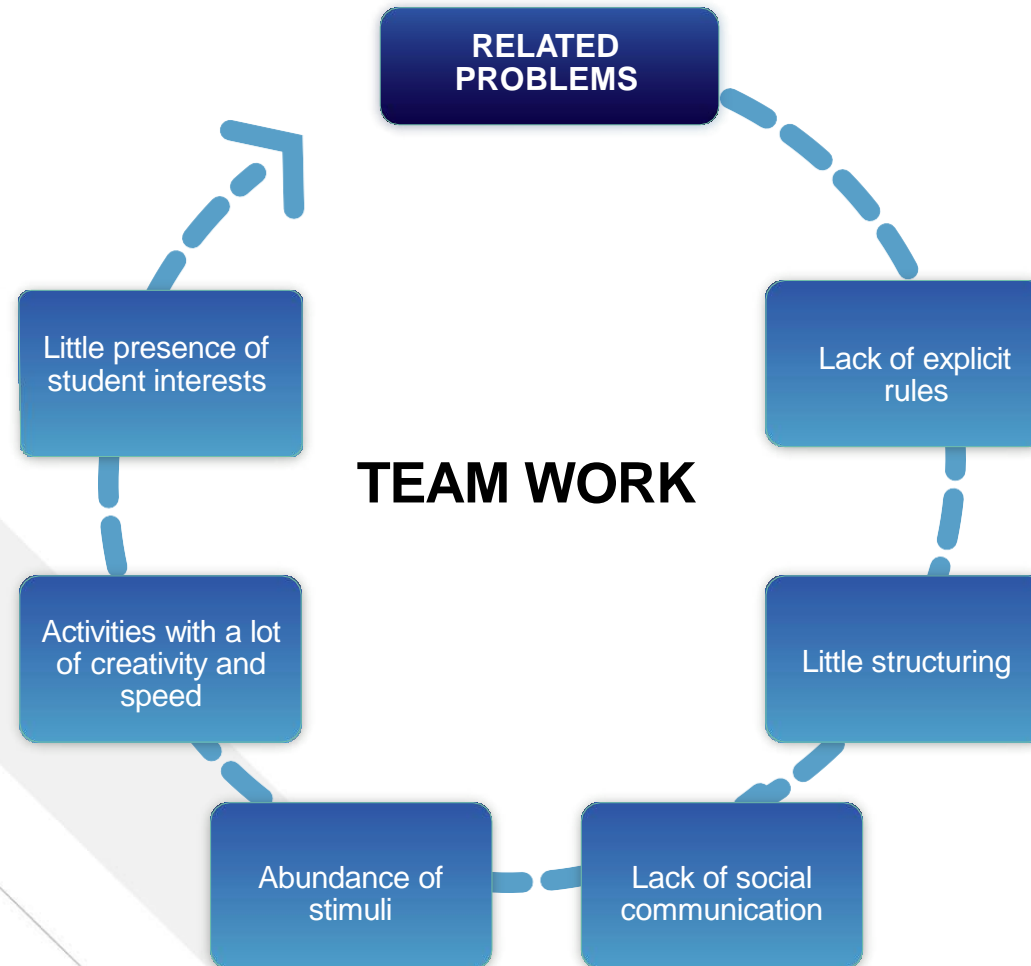

The time to analyze the sentence is approximately 10 minutes.

The value of this question is a maximum of 2 points.

If you have plenty of time, use it to review, check that you have written the entire exam correctly and that you have done the exercises well.

**2. Support
proposals related
to:**

TEAM WORK

**2. Support
proposals related
to:
GUIDELINES**

Groupings according to the students most related to the student with ASD.

Provide explicit information and written job requirements.

Extend presentation times, different formats, etc.

Scripts that facilitate the development of creative activities.

Temporal and spatial structuring strategies.

Self-assess the activity together with the student with ASD

Closely supervise the group.

**2. Support
proposals related
to:**

**SUBJECT
SUPPORT**

Students with ASD may have trouble with a specific subject due to:

Difficulty planning and solving problems, problems understanding and difficulty understanding abstract concepts.

Focusing on insignificant details, not capturing the main ideas of the tasks.

Appear distracted and have more specific attention time on tasks not chosen
(Merino M., García R. 2011 p. 46)

2. Support proposals related to:

Anticipation

- Use visual cues
- Establish routines
- Monitor the school agenda

Motivation and attention

- Explanations in sequence
- Provide exams and notes in advance
- Use color coding or visual cues for important concepts

Exams

- Visual calendars in the classroom
- Clear and simple language
- Written listing of everything you need

Rules

- Explain explicitly
- Social scripts
- Establish conduct contracts

Rest and relaxation

- Allow them to leave the classroom in advance or at specific times

**2. Support
proposals related
to:
MOTIVATION**

**Howard Garner's theory of
multiple intelligences**

Verbal - linguistics
Logical - mathematical
Corporal - kinesthetic
Visual - spatial
Intrapersonal
Interpersonal
Musical
Naturalist

Gardner sees intelligence as the grouping of
different specific abilities and defends
intelligence as a skill

**We must find what really
motivates them to work
around it in the classroom.**

*An example of this is if the
student with ASD has a highly
developed naturalistic
intelligence, we have to try to
develop their centers of interest
in the classroom through this
intelligence so that the student
feels motivated and has the
desire to learn.*

2. Support proposals related to: **ACTIVITIES**

PUBLIC PRESENTATIONS

Students with ASD have problems expressing things that require public presentations due to their communication problems and relationship problems with the rest of their classmates. Therefore, it is important to work on various aspects such as: **memory, problem solving, language, motivation and sequences.**

PHYSICAL EDUCATION

It is very likely that students with ASD do not feel comfortable in the physical education subject due to their high degree of relationship with the rest of their classmates, this is because they may encounter a series of barriers.

2. Support proposals related to: **ACTIVITIES**

PUBLIC PRESENTATIONS

MEMORY

- Provide visual materials.
- Group the elements so that they are meaningful.
- Work sequences of scenes or symbols

PROBLEM SOLVING

- Provide alternative answers and teach that different situations may require different approaches.
- Reflect on the process by which you have arrived at the solution.

LANGUAGE

- Use the communication signed while the student is presenting so that he / she progresses gradually.
- Sit next to the person, in front of a mirror to rehearse.

MOTIVATION

- Actively encourage them to explore new situations through tangible rewards.
- Introduce self-reward systems ranking the preferred activities of students.

SEQUENCES

- Reflect on new sequences in a meaningful context
- Predict the elements of a sequence

Needs related to the learning of ASD students. Adapted from Jordan and Powel (1992). Page 159-160. Cuesta J.L and Cols, 2016. Autism spectrum disorder: educational intervention and training throughout life. **Psychology, Society & Education**, Vol. 8 (2)

2. Support proposals related to: **RECESS**

PHYSICAL EDUCATION

Develop leisure alternatives such as guided games.

Establish the rotating figure of a game mediator between the peer group and the students with ASD, so that they act as supports to develop the activities.

Organize games and review the rules with all the students.

Develop routines through scripts to promote communication and interaction with classmates at recess.

What is your favorite food?
What is your favorite television series?
What have you done this weekend?
How did the exam go?

Teach explicitly to respond to unwanted jokes and social behavior.

Needs related to the learning of ASD students. Adapted from Jordan and Powel (1992). Page 159-160. Cuesta J.L and Cols, 2016. Autism spectrum disorder: educational intervention and training throughout life. Psychology, Society & Education, Vol. 8 (2)

**2. Support
proposals related
to:
ORGANIZATION OF
RECESS AND TIMES
WITH LESS
STRUCTURE**

Students with ASD have to have everything that is done in the day-to-day totally clear and integrated even when they have not foreseen any change since any change that is made, even very small, can increase their anxiety.

2. Support proposals related to:

NOTIFY THE CHANGES

SOCIAL STORIES

(prepared by Carol Gray in 2000).

Short stories, like a script accompanied by images that explain the information of a specific context, inform about why it happens, with whom they are going to interact and how the protagonist should act.

For example, in the following image we can see how they tell the student with ASD how to act when angry

2. Support
proposals related
to:
**VISUAL
SCHEMES**

VISUAL SCHEMES

That incorporate the activities this helps us to introduce specific changes at certain times. In the image below you can see an example of how a routine change schedule has been developed

DAILY SCHEDULE

Today is Monday, May 22, 2019

Arrival	8:15
Math	8:20 - 9:00
Reading	9:00 - 10:00
Spell	10:00 - 10:15
Write	10:15 - 10:45
"Assembly"	10:45 - 11:30
Lunch	11:30 - 12:15
Music	12:30 - 1:15
Science	1:15 - 1:50
Reading aloud	1:50 - 2:20
Prepare to leave	2:20 - 2:25
Bell	2:30

* Sometimes the schedule can change

Example of schedule. Page 13. Smith B and Cols (s.f.). **Simple strategies that work. Helpful tips for all student educators include Asperger's Syndrome, High-Functioning Autism, and Related Disabilities.**

**2. Support
proposals related
to:
RECESS,
ENTRIES, EXITS
AND TRANSITS**

RECESS

- Badly structured situation
- Much weight in verbal exchanges
- They don't have many relational skills
- Restricted and focused interests

ENTRIES, EXITS AND TRANSITS

- Issues related to frequent class changes and the speed with which they are made
- Agglomerations on the move
- Accidental frequency of physical contact
- Poor interpretation of other people's behaviors in case they are accidental or intentional

2. Support proposals related to: **RECESS**

Develop leisure alternatives such as guided games.

Establish the rotating figure of a game mediator between the peer group and the students with ASD, so that they act as supports to develop them

Organize games and review the rules with all the students.

Develop routines through scripts to promote communication and interaction with classmates at recess.

What is your favorite food?

What is your favorite television series?

What have you done this weekend?

How did the exam go?

Teach explicitly to respond to unwanted jokes and social behavior.

Strategies.. Pág 68-71. Romero A and Cols, 2019. **Students with ASD. Guidelines for planning the educational response. Educational proposals to intervene in infant, primary and secondary school.**

2. Support proposals related to: **ENTRIES, EXITS AND TRANSITS**

Allow the student to leave class a few minutes before or after the rest of his classmates.

Promote tutoring activities among classmates using rotation.

Create signs and make explicit the rules to favor movement.

Adapt the acoustic signals to the characteristics of the student.

Teach to interpret explicitly to interpret the behaviors of their classmates.

Strategies. Pág 68-71. Romero A and Cols, 2019. Students with ASD. Guidelines for planning the educational response. Educational proposals to intervene in infant, primary and secondary school.

2. Support
proposals related
to:
**SENSORY
CONTROL AND
SELF-REGULATION**

Students with ASD have sensory needs, this is because their sensory system is impaired because *"The nervous system is not able to properly interpret and organize the information captured by the various sensory organs of the body."*
(Bellefeuille, 2006, p.201).

Apart from sensory problems, they can also have behavior problems due to socio-communicative alterations, stereotyped behaviors, restricted interests and sensory alterations

2. Support
proposals related
to:

SENSORY STIMULATION

HYPERSENSITIVE

Exaggerated response to the
demand of the environment

For example, the noise at a concert is likely to cause some children considerable discomfort, while others are fascinated by the bright lights that routinely annoy the people around them.

To work it, it is necessary to attend to the different systems: **visual, auditory, olfactory, gustatory, tactile, proprioceptive and vestibular**

HYPOSENSITIVE

They lack reaction to
environmental stimuli

2. Support proposals related to: **SENSORY STIMULATION**

Systems

Strategies

VISUAL

- Games with mirrors and flashlights
- Use luminous balls
- Use a gadget that makes bubbles of different sizes
- Playing with fluorescent paints

AUDITORY

- Songs
- Imitate animal sounds
- Musical games
- Make objects that the student can take with them that make noise

OLFACTORY

- Make fragrant boxes (in each box you can add a different smell)
- Use scented candles and incense.
- Game that consists of smelling food and guess what it is about.
- Associate smells with places or associate smells with seasons of the year.

GUSTATORY

- Make a guessing game with different flavors (sour, sweet, salty, sour)

TACTILE

- Create touch panels with different textures
- Play with food textures
- Walking through different textures barefoot

PROPIOCEPTIVE

- Create bags with different weights to put on top of the body.
- Play with weights.
- Push the wall with your hands
- Jump rope
- Roll on the floor

VESTIBULAR

- Roll with balls
- Jumping or bouncing activities (sitting, kneeling or standing)
- Slide down slides

2. Support
proposals related
to:
**SELF-
REGULATION**

DIFFICULT

Understand or
misinterpret
actions

Behavior
problems

Behavior problems can be generated since in students with ASD cognitive empathy is normally altered "Ability to understand the thoughts that lead other people to certain emotions" (Hervás A., Rueda I., 2018) and more conserved emotional empathy , which is "The ability to emotionally tune into the emotions of other people" (Hervás A., Rueda I., 2018)

2. Support proposals related to:

ENVIRONMENTAL ADAPTATIONS

We must remove the stimuli that cause hyperstimulation, create motivating activities and a space where students with ASD can relax.

CHANGE YOUR EMOTIONAL STATE

Carry out activities that change your emotional state favoring positive self-regulation.

USE STRUCTURE, ROUTINES AND VISUAL AIDS

The structure helps them to understand the environment, the routines to anticipate sequences and the images can be used as reminders or transitions.

USE POSITIVE PROACTIVE INSTRUCTIONS

If they are blocked, use activities that are pleasant and that are of interest to them and then try again.

3. Guidelines to promote communication

GUIDELINES TO ENCOURAGE COMMUNICATION

Sometimes they don't understand what is being said to them or; in some cases they do not have eye contact and their attention is poor. Therefore, it is very important to have strategies to **communicate** with students with ASD.

Apart from communicating with students as well, it is very important to maintain **fluid communication with parents** in order to observe the changes, needs and evolutions of their children.

3. Guidelines to promote communication

BASIC ADAPTATIONS IN COMMUNICATION WITH STUDENTS

Comprehension related problems such as:

Not understanding the messages that are transmitted orally or

Difficulty integrating words into the sentence or context.

Therefore, to help students it is important to have a series of **strategies**.

Speak with clear style

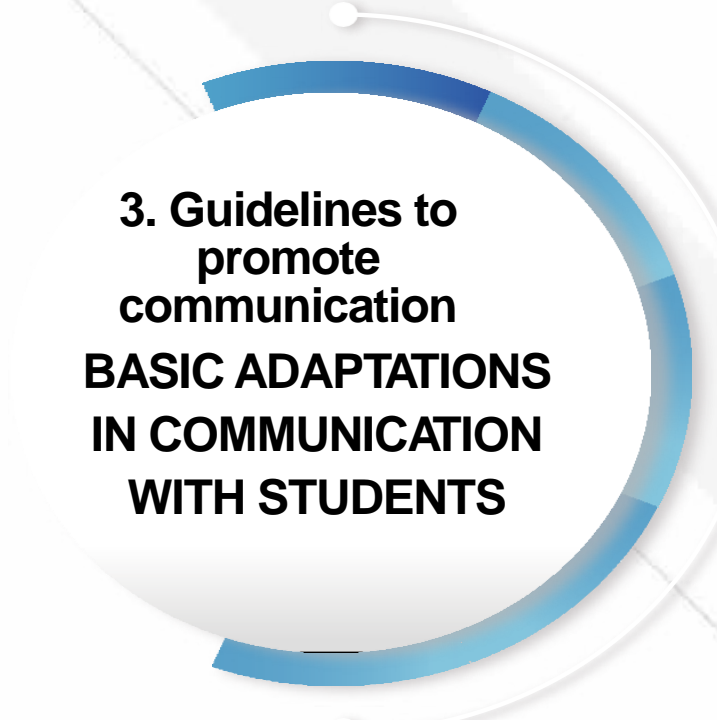

Avoid sarcasm, irony or double meanings

Make some concepts explicit, especially those related to social relationships

You have to give them time to process the information

Provide context for works to make it easier for them to understand

Help them with images to communicate

3. Guidelines to promote communication

BASIC ADAPTATIONS IN COMMUNICATION WITH STUDENTS

Family-centered model:

Conceiving the family as a social support system.

Recognize the importance of the family context in the development of students

Believe that families can develop their strengths and increase their feelings of ability.

Invite family members as active participants in any planning process

Empower and empower the family so that it can function effectively in its environment.

Guide the family based on their concerns.

3. Guidelines to promote communication

HOW TO MANAGE THE SOCIAL INFORMATION WITH THE FAMILY?

it is very important that there is a **climate of trust** and that there is a continuous climate of **dialogue and communication**.

DIMENSIONS

Communication

It is very important to pay attention to what the family has to say, as well as, professionals have to act assertively by putting themselves in the opposite place.

Confidence

In order to give the information, it is vital that a climate of security and trust be provided with the family.

Family training

Families must be helped to acquire information so that they are able to get what their children need.

Respect

We must show respect for opinions and points of view towards families.

Equity in decisions

We must involve them in their children's decisions at school.

IFamily centered model. Page 84. Romero A and Cols, 2019. Students with ASD. Guidelines for planning the educational response. Educational proposals to intervene in infant, primary and secondary school.
